Node Filling with Log Annotation.

How to stop the log annotation from filling the discs in the nodes and Jenkins control

Deleted /var/log messages and rebooted the controller

Log spamming continued overnight and caused the stage control to have no disk space

Those warnings are different

One of the things is that these plugs have outdated dependencies

Solutions - two rounds

- Research each plugin with error incompatible and figure because the new version is marked as incompatible)

Round 1

- Plugin that are compatible but with outdated dependencies – red warning (compatible an
- Plugin main without dependencies - Main
- We will update obsolete (slack) and decommission them

Team leads from marketing and integration team because they are the one who are using Jenkins a lot to build and test.

Sent out an announcement should be sent 48 hours before the change to all team. Section for general (Announcement) – Jira (Announcement) or Microsoft team

Change Advisory Board (CAB) will approve the meeting

8:00 pm with two-hour outage window
